MySESAM.CH

CATALOGUE 2021

PRIME version TOP

GENERAL SPECIFICATION

COMPATIBILITY

It is compatible with the majority of fixed codes and multifrequency rolling codes, for every single channel.

MODELS

- **It is possible to distinguish the version Prime TOP from the version F by the caption printed on the back of the remote.**
- **Battery 2032**

VARIETY OF COLOURS

PT000-41 PT000-42 PT000-410 PT000-411 PT101010-410

LED COLOUR

The led is GREEN when:
- It memories a fixed code.
- It transmits a fixed code.
- During the AUTOMATIC MEMORISATION TO THE RECEIVER VIA RADIO.

The led is RED when:
- It memorises a rolling code.
- It transmits a rolling code.

.

PROCEDURE OF HIDDEN BUTTON/SOURCE CODE TRANSMISSION

1– Press the buttons ❷ and ❹ simultaneously and release them when the RED led flashes.

2– While the led is flashing, press the duplicated button: **PRIME** will be transmitting the SOURCE CODE until you release the button.

DUPLICATION PROCEDURE

ACM | CASALI | DEA SYSTEM | NOVOFERM

1– On **JANE** remote press the buttons ❶ e ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash **RED** quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of **JANE** becomes fixed and **RED**, and then it turns off flashing **RED**, it means that the duplication was successful. At this point release the button of the original remote.

original remote

MEMORISATION IN THE RECEIVER

The memorisation must be done directly in the receiver.

1– On the receiver press the button P or PROG.

2– Press the button on **JANE**.

Wait 10 seconds to verify the successful procedure.

CODE GENERATION PROCEDURE

This procedure is used in case you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– Press **N times** the button you want to generate:

N 5 times: DEA SYSTEM
N 16 times: ACM
N 17 times: CASALI
N 27 times: NOVOFERM

3– After this, the led flashes **RED** quickly and then becomes fixed on **RED**. This means that the procedure has been successful.

DUPLICATION PROCEDURE

ALLMATIC	APRIMATIC	BENINCÀ	FAAC RC	FADINI
GENIUS ADYX	GIBIDI	MHOUSE	MOOVO	NICE mod. SMILO
O&O	SEAV	V2		

1– On **JANE** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash red quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of **JANE** becomes fixed and **RED**, and then it turns off flashing **RED**, it means that the duplication was successful. At this point release the button of the original remote.

original remote

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the buttons ❶ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– While the led is flashing **RED**, press the programmed button and release it: the led starts to flash **GREEN**. The automatic procedure starts and will last about 20/25 seconds.
Wait for the opening of gates, doors, lights etc.

If the automatic programming via radio isn't working, repeat the whole procedure.
If the gate/door opens after a few seconds (less than 20 seconds), it means that the receiver is enabled to memorise the remotes only manually. Therefore, program the remote control by working directly in the receiver.

CODE GENERATION PROCEDURE

This procedure is used in case you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– Press **N times** the button you want to generate.

N 2 times: NICE mod. SMILO

BENINCÀ mod. HAPPY VA – IRI VA – TO.GO VA

original remote

1– On Jane remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash RED.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash red quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of **JANE** becomes fixed and then it turns off flashing RED, it means that the code has been acquired. Therefore, release the button on the original remote.

IF IN THE LAST PART OF THE DUPLICATION PROCEDURE THE LED STOPS FLASHING AND TURNS OFF, IT MEANS THAT THE DUPLICATION CANNOT TAKE PLACE.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the buttons ❶ and ❸ simultaneously, then release them: the led starts to flash RED.

2– While the led is flashing red, press the programmed button and release it: the led starts to flash GREEN.
The automatic procedure starts and will last about 20/25 seconds.
Wait for the opening of gates, doors, lights etc.

If the automatic programming via radio isn't working, repeat the whole procedure.
If the gate/door opens after a few seconds (less than 20 seconds), it means that the receiver is enabled to memorise the remotes only manually. Therefore, program the remote control by working directly in the receiver.

CODE GENERATION PROCEDURE

This procedure is used in case you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash RED.

2– Press **N times** the button you want to generate

N 4 times: BENINCÀ

3– After this, the led flashes RED quickly and then becomes fixed RED. This means that the procedure has been successful.

DUPLICATION PROCEDURE

BFT

original remote

1– On **JANE** press the buttons ❶ and ❷ simultaneously and release them when he led starts to flash **RED**.

2– While it is flashing, press the button on **JANE** you want to program, and release it when the **RED** led flashes quickly.

3– While the led of **JANE** is flashing quickly, transmit the source code of the original remote by pressing the buttons 1 and 2 simultaneously.

4– Place the remotes as in the picture and wait that the led of **JANE** stops flashing and becomes fixed. So, release the buttons 1 and 2 of the original remotes.

5– The led of **JANE** starts to flash again: press the working button on the original remote, and release it when the **RED** led on **JANE** becomes fixed again and then it turns off.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

This procedure must be done near the installation.

1– Press the buttons ❶ e ❸ simultaneously, then release them: the led starts to flash **RED**.

2– While the led is flashing **RED**, press the programmed button and release it: the led starts to flash **GREEN**. The automatic procedure starts and will last about 20/25 seconds.
Wait for the opening of gates, doors, lights etc..

If it doesn't open automatically, repeat the whole procedure.
If the gate/door opens after a few seconds (less than 20 seconds as mentioned), it means that the receiver is enabled to memorise the remotes only manually. So, program the remote control working directly in the receiver.

CODE GENERATION PROCEDURE

This procedure is used when you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– Press 1 time the button you want to generate.

3– After this, the led flashes **RED** quickly and then becomes fixed **RED**. This means that the procedure has been successful.

DUPLICATION PROCEDURE FROM TOP 01 TO TOP 01

This procedure is used when you have to copy a **JANE** from a **JANE** which is already working on BFT.
*We call **REMOTE A** the **JANE that we have to program.***
*We call **REMOTE B** the **JANE already working.***

REMOTE B
already working

REMOTE A

1– On **REMOTE A** press the buttons ❶ and ❷ simultaneously and release them when the led starts to flash **RED**.

2– While it is flashing, press the button on **REMOTE A** you want to program, and release it when the red led flashes quickly.

3– While the led of **REMOTE A** is flashing quickly, on **REMOTE B** press the buttons ❷ and ❹ release them when the led flashes **RED**.

4– Place the remotes as in the picture. Press the working button on **REMOTES B** until the led of **REMOTE A** becomes fixed on **RED**.

5– The led of **REMOTE A** starts to flash again: press the working button on **REMOTE B** until the led on **REMOTE A** becomes **RED** fixed on **RED** again and then turns off.

DUPLICATION PROCEDURE

FAAC for all SLH models	GENIUS mod. AMIGO – GOLD – KILO

This procedure is possible only if the working remote is a master.
Ensure that the original remotes is master by checking that when pressing any button the led flashes once and then stays on.
On the contrary, if the led is fixed, the procedure cannot take place.

original remote

1– On **JANE** press the buttons ❶ and ❷ and release them when the led starts to flash **RED**.

2– While it is flashing, press the button on **JANE** you want to program, and release it when the **RED** led flashes quickly.

3– While the led of **JANE** is flashing quickly, press simultaneously the buttons 1 and 2 on the original remote and release them when the led starts to flash.

4– While the leds of the two remotes are flashing, place the remotes as in the picture and press the button of the original remote that you want to duplicate; release it when the **RED** led on **JANE** is fixed.

5– The led of **JANE** starts to flash again: press the working button on the original remote, and release it when the **RED** led on **JANE** becomes fixed again and then turns off.

MEMORISATION IN THE RECEIVER

This procedure must be done near the installation.

1– Press twice the duplicated button on **JANE**: the buttons will be working immediately.

DUPLICATION PROCEDURE FROM TOP 01 TO TOP 01

This procedure is used when you have to copy a **JANE** from a **JANE** which is already working.
*We call **REMOTE A the Jane that we have to program.***
*We call **REMOTE B the Jane already working.***

REMOTE B
already working

REMOTE A

1– On **REMOTE A** press the buttons ❶ and ❷ simultaneously and release them when the led starts to flash **RED**.

2– While it is flashing, press the button on **REMOTE A** you want to program, and release it when the **RED** led flashes quickly.

3– While the led of **REMOTE A** is flashing quickly, on **REMOTE B** press the buttons ❷ and ❹ and release them when the led flashes **RED**.

4– Place the remotes as in the picture. Press the working button on **REMOTES B** until the led of **REMOTE A** becomes fixed on **RED**.

5– The led of **REMOTE A** starts to flash again: press the working button on **REMOTE B** until the led on **REMOTE A** becomes fixed on **RED** again and then turns off.

DUPLICATION PROCEDURE

FADINI mod. DIVO 71

The procedure must be done far from the installation.

original remote

1– On **JANE** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash red quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of Jane becomes fixed on **RED** and then it turns off flashing **GREEN** means that the original remote is a fixed code and it will be immediately working.
If it becomes red and then turns off flashing **RED**, the original remote is a rolling code; therefore, it will be working only after the memorisation in the receiver.
.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the buttons ❶ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2- While the led is flashing **RED**, press the programmed button and release it: the led starts to flash **GREEN**. The automatic procedure starts and will last about 20/25 seconds.

Wait for the opening of gates, doors, lights etc.

CODE GENERATION PROCEDURE

This procedure is used in case you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2- Press **4 times** the button you want to generate.

After this, the led flashes **RED** quickly and then becomes fixed red. This means that the procedure has been successful.

DUPLICATION PROCEDURE

CARDIN mod. FM400E | TELCOMA mod. FM400 – FM400E

1– On **JANE** remote press the buttons ❸ and ❹ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash **RED** quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of **JANE** becomes fixed and then it turns off flashing **RED**, it means that the code has been acquired. Therefore, release the button on the original remote.
If the led turns off flashing **GREEN**, change the position of the remotes and repeat the procedure.

original remote

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the buttons ❶ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– While the led is flashing **RED**, press the programmed button and release it: the led starts to flash **GREEN**. The automatic procedure starts and will last about 20/25 seconds.
Wait for the opening of gates, doors, lights etc.

If the automatic programming via radio isn't working, repeat the whole procedure.

If the gate/door opens after a few seconds (less than 20 seconds), it means that the receiver is enabled to memorise the remotes only manually. Therefore, program the remote control by working directly in the receiver.

CODE GENERATION PROCEDURE

This procedure is used in case you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– Press **7 times** the button you want to generate.

3– After this, the led flashes **RED** quickly and then becomes fixed **RED**. This means that the procedure has been successful.

DUPLICATION PROCEDURE

BALLAN mod. S435 CARDIN mod. S435

1– On **JANE** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash **RED** quickly.

3– While the led of **JANE** is flashing quickly, place the original remote and Jane as shown in the picture. Press without releasing the button of the original remote you wish to duplicate until the **RED** led become fixed; then release the button.

4– The led of **JANE** starts to flash again: press another time the same button of the original remote until the **RED** led becomes fixed again and then turns off flashing **RED**.

At the end of this procedure, the button of **JANE** transmits the code by flashing **RED**. The remote is immediately fully functional.

original remote

DUPLICATION PROCEDURE

DITEC ENTREMATIC mod. GOL4

Through this procedure, we do not memorise the codes by using the original remotes: **JANE** generates the codes.

If the button 1 is working on the original remote, you need to generate the button ❶ on **JANE** If button 2 is working, you need to generate button ❷, button 3 with button ❸, button 4 with button ❹.

1– On **JANE** press the buttons ❷ and ❸ simultaneously and release them when the led starts to flash RED.

2– While it is flashing, press and release **6 times** the button on **JANE** you want to duplicate.

Once finished, the led flashes quickly and then becomes fixed on RED: this means that the procedure was successful.

MEMORISATION IN THE RECEIVER

This procedure must be done near the installation.

1– Take a pin and press the hidden button that is inside the original remote control, release it when the led turns on.

2– Press for 6/7 seconds the generated button on **JANE**.

Press the generated button and wait 10 seconds to verify the successful memorisation.

DUPLICATION PROCEDURE

CHAMBERLAIN LIFTMASTER MOTORLIFT | DOORHAN | ECOSTAR | JCM mod. NEO

1– On **JANE** press the buttons ❶ and ❷ simultaneously and release them when the led starts to flash **RED**.

2– While it is flashing, press the button on **JANE** you want to program, and release it when the **RED** led flashes quicky.

3– While the led of **JANE** is flashing quickly, place the original remote and **JANE** as in the picture. Press without releasing the button of the original remote control.

4– The led of **JANE** becomes fixed on **RED** and then turns off; this means that the procedure was successful. Therefore, release the button on the original remote.

original remote

MEMORISATION IN THE RECEIVER

The memorisation must be done directly in the receiver.

1– Press and release the button P or PROG on the receiver.

2– Press the button on **JANE**.

Wait 10 seconds to verify the successful memorisation.

CODE GENERATION PROCEDURE

This procedure is used in case you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– Press **N times** the button you want to generate:

N 2 times: CHAMBERLAIN LIFTMASTER MOTORLIFT mod. 9433EML
N 3 times: CHAMBERLAIN LIFTMASTER MOTORLIFT mod. 371LM-372LM-373LM-374LM
N 10 times: JCM mod. ECO 433
N 13 times: DOORHAN
N 15 times: ECOSTAR

3– After this, the led flashes **RED** quickly and then becomes fixed **RED**. This means that the procedure has been successful.

DUPLICATION PROCEDURE

KING GATES

Through this procedure, we do not memorise the codes by using the original remotes: **JANE** generates the codes.

If the button 1 is working on the original remote, you need to generate the button ❶ on **JANE**. If button 2 is working, you need to generate button ❷, button 3 with button ❸, button 4 with button ❹.

1– On **JANE** press the buttons ❷ and ❸ simultaneously and release them when the led starts to flash **RED**.

2– While it is flashing, press and release **5 times** the button on **JANE** you want to duplicate.

Once finished, the led flashes quickly and then becomes fixed on **RED**: this means that the procedure was successful.

MEMORISATION IN THE RECEIVER

The memorisation must be done directly in the installation:

1– Press and release the button RADIO on the control unit: the led turns on.

2– Press the button on **JANE** that was generated.

3– The led of the control unit turns off and then turns on again: release the button on **JANE**.

When the led of the control unit turns off, open the gate by pressing the generated button in order to verify the successful memorisation.

DUPLICATION PROCEDURE

NICE

Through this procedure, we do not memorise the codes by using the original remotes: **JANE** generates the codes.

If the button 1 is working on the original remote, you need to generate the button ❶ on **JANE.** If button 2 is working, you need to generate button ❷, button 3 with button ❸, button 4 with button ❹.

1– On **JANE** press the buttons ❷ and ❸ simultaneously and release them when the led starts to flash **RED**.

2– While it is flashing, press and release **1 time** the button on **JANE** you want to duplicate.

Once finished, the led flashes quickly and then becomes fixed on **RED**: this means that the procedure was successful.

MEMORISATION IN THE RECEIVER

This procedure must be done near the installation:

1– Press for 10 seconds the generated button of **JANE**.

2– Press slowly **3 times** the working button on NICE.

3– Press again for about 3/4 seconds the generated button of **JANE**.

Press the generated button and wait 10 seconds to verify the successful memorisation.

ATTENTION!

IF THE GATES OPENS AT POINT NUMBER 2, RESTART THE PROCEDURE FROM POINT 1.

DUPLICATION PROCEDURE

PRASTEL

Through this procedure, we do not memorise the codes by using the original remotes: **JANE** generates the codes.

If the button 1 is working on the original remote, you need to generate the button ❶ on **JANE.**
If button 2 is working, you need to generate button ❷, button 3 with button ❸, button 4 with button ❹

1– On **JANE** press the buttons ❷ and ❸ simultaneously and release them when the led starts to flash **RED**.

2– While it is flashing, press and release **4 times** the button on **JANE** you want to duplicate.

Once finished, the led flashes quickly and then becomes fixed on **RED**: this means that the procedure was successful.

MEMORISATION IN THE RECEIVER

This procedure must be done near the installation:

1– On PRASTEL remote press and release simultaneously the buttons 1 and 2: the led turns on and then off.

2– When the led of PRASTEL turns on again, press the buttons 1 and 2 and wait for the led to flash **5 times**. Then, release the buttons when the led flashes quickly.

3– On **JANE** press for 6 seconds the generated button.

Press the generated button and wait 10 seconds to verify the successful memorisation.

DUPLICATION PROCEDURE

SILVELOX

1– On **JANE** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash red quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of **JANE** becomes fixed on **RED** and then it turns off flashing **RED** means that that the code has been acquired. Then, release the button on the original remote.

original remote

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the buttons ❶ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– While the led is flashing **RED**, press the programmed button and release it: the led starts to flash **GREEN**. The automatic procedure starts and will last about 20/25 seconds.

Wait for the opening of gates, doors, lights etc.

If the automatic programming via radio isn't working, repeat the whole procedure.

If the gate/door opens after a few seconds (less than 20 seconds), it means that the receiver is enabled to memorise the remotes only manually. Therefore, program the remote control by working directly in the receiver.

CODE GENERATION PROCEDURE

This procedure is used in case you don't have the original remote.

1– Press the buttons ❷ and ❸ simultaneously, then release them: the led starts to flash **RED**.

2– Press **12 times** the button you want to generate..

3– After this, the led flashes **RED** quickly and then becomes fixed **RED**. This means that the procedure has been successful.

GENERATION PROCEDURE

ENTREMATIC mod. ZEN

Through this procedure, we do not memorise the codes using the original remotes, the **JANE** generates the codes.

During the procedure it is important to respect the button numeration: the code in the button 1 of the original remote can be generated only in the button ❶ of **JANE**, the code in the button 2 of the original remote can be generated only in the button ❷ of **JANE**, and so on.

1– On **JANE** remote, press the buttons ❷ and ❸ simultaneously and release them when the led starts to flash **RED**.

2– While it is flashing, press and release **6 times** the button on **JANE** you want to duplicate.

Once finished, the led flashes quickly and then becomes fixed on **RED**: this means that the procedure was successful.

MEMORISATION IN THE RECEIVER

This procedure must be done near the installation.

1– In the model ZEN2, press simultaneously the two buttons and release them when the **RED** led becomes fixed. In the model ZEN4 press simultaneosly the buttons 1 and 4. While the led is fixed, press the buttons 1 and 2 on ZEN2, 1 and 4 on ZEN4. Release the buttons when the remotes starts to flash again.

2– Press for 6/7 seconds the generated button on **JANE**.

Press the generated button and wait 10 seconds to verify the successful memorisation.

FIXED CODE REMOTE DUPLICATION PROCEDURE

Compatible with multi frequency fixed code remotes, except crystal quartz frequency

original remote

1– On **JANE** press the buttons ❶ and ❷ simultaneously, and release them when the led starts flash **RED**.

2– While the led is flashing, press the button on **JANE** you want to program, and release it when the led starts to flash **RED** quickly.

3– While the led is flashing quickly, place the remotes as in the picture. Press without releasing the button you want to duplicate on the original remote.

4– When the led of **JANE** becomes fixed and **RED**, and then switches off flashing **GREEN**, it means that it has acquired the code. Therefore, release the button on the original remote.

After the procedure, when transmitting the code with **JANE** , the led will flash **GREEN**. The **JANE** will be immediately working.

FIXED CODE GENERATION PROCEDURE

This procedure is used when:
- You don't have the working remote (if you don't know the compatible code with the receiver, you have to generate all the possible combinations)
- You want to combine the remote to the receiver **RXJF2C**.

1– Press the buttons ❶ and ❹ simultaneously, and release them when the **RED LED** starts to flash

2– Press **N times** the button you want to generate.

N 1 time: codes HT12 with frequency 433.92 MHz
N 2 times: codes HT12 with frequency 868 MHz
N 3 times: codes HT24 with frequency 433.92 MHz
N 4 times: codes HT24 with frequency 868 MHz

3– After this procedure, the led flashes **GREEN** quickly and then becomes **RED** and fixed: this means that the generation has happened successfully.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of **PRIME** becomes fixed, it means that the code has been acquired. Then, release the button on the original remote.

IF IN THE LAST PART OF THE DUPLICATION PROCEDURE THE LED STOPS TO FLASH AND THEN TURNS OFF, IT MEANS THAT THE DUPLICATION IS NOT POSSIBLE.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the programmed button on **PRIME**, release it when the RED led turns off and the GREEN led starts to flash.

2– Wait for the led to stop flashing. Therefore, press again the button to verify that the procedure was successful.

DUPLICATION PROCEDURE

BFT

The procedure must be done far from the installation.

original remote

1– On **PRIME** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **PRIME** you want to program, and release it when the **RED** led starts to flash more quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– When the led of **PRIME** becomes fixed, it means that the code has been acquired. Then, release the button on the original remote.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the programmed button on **PRIME**, release it when the **RED** led turns off and the **GREEN** led starts to flash.

2– Wait for the led to stop flashing. Therefore, press again the button to verify that the procedure was successful.

DUPLICATION PROCEDURE FROM PRIME TOP TO PRIME TOP

This procedure is used when you have to copy a **PRIME** from a **PRIME** which has already been programmed.

We'll call **REMOTE A** the PRIME that we need to program, and **REMOTE B** the PRIME already working.

REMOTE B
already working

1– On **REMOTE A** press the buttons ❶ and ❷ simultaneously and release them when the led start to flash **RED**.

2– While it is flashing, press the button on **REMOTE A** you want to program, and release it when the **RED** led flashes quickly.

3– While the led is flashing, place both remotes as shown in the picture. Press the button on **REMOTE B** you want to program; release it when the led of **REMOTE A** becomes fixed.

REMOTE A

4– The led of **REMOTE A** starts to flash again: transmit the source code of **REMOTE B** by pressing simultaneously the buttons ❷ and ❹, and release them when the led of **REMOTE B** flashes. Press the programmed button and release it when the led of **REMOTE A** becomes fixed again and then turns off.

FIXED CODE REMOTE DUPLICATION PROCEDURE

Compatible with multi frequency fixed code remotes, except crystal quartz frequency.

1– On **PRIME** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **PRIME** you want to program, and release it when the **RED** led starts to flash more quickly.

3– While the led is flashing quickly, place both remotes as shown in the picture. Press without releasing the button of the original remote you want to copy..

4– When the led of **PRIME** becomes fixed on **GREEN** and then turns off, it means that the code has been acquired. Then, release the button of the original remote.

After this procedure, the programmed button on **PRIME** will transmit the code with the **GREEN** led and it will be immediately working.

DUPLICATION PROCEDURE

AVIDSEN

1– On **PRIME** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **PRIME** you want to program, and release it when the **RED** led starts to flash more quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press the button of the original remote you want to copy; release it when the led of **PRIME** becomes fixed.

4– The led of **PRIME** starts to flash again: press the same button on the original remote control until the **RED** led becomes fixed for the second time and then turns off.

RECEIVER MANUAL PROGRAMMING

The memorisation must be done directly in the receiver.

1– On the receiver press and release the button **ERN, MEMO, PROG, REC** (depending on the model): the led turns on.

2– Press the programmed button on **PRIME** and release it when the led of the receiver flashes.

3– Wait for the led of the receiver to stop to flash. Press another time the programmed button of **PRIME** to verify the successful procedure.

DUPLICATION PROCEDURE FROM PRIME TOP TO PRIME TOP

This procedure is used when you have to copy a **PRIME** from a **PRIME** which has already been programmed.

We'll call **REMOTE A** the **PRIME** that we need to program, and **REMOTE B** the **PRIME** already working.

REMOTE B already working

1– On **REMOTE A** press the buttons ❶ and ❷ simultaneously and release them when the led start to flash **RED**.

2– While it is flashing, press the button on **REMOTE A** you want to program, and release it when the **RED** led flashes quickly.

3– While the led is flashing, place both remotes as shown in the picture. Press the button on **REMOTE B** you want to program; release it when the led of **REMOTE A** becomes fixed.

4– The led of **REMOTE A** starts to flash again: press the same button on **REMOTE B** until the red led becomes fixed **RED** again and then turns off.

REMOTE A

DUPLICATION PROCEDURE

FAAC for all SLH models	GENIUS mod. AMIGO – GOLD – KILO

This procedure is possible only if the working remote is a master. Ensure that the original remote is a master by checking that when pressing any buttons, the led flashes twice. On the contrary, if the led is fixed, this procedure cannot take place.

1– On **PRIME** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **PRIME** that you want to program, and release it when the **RED** led starts to flash more quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy, release it when the led of **PRIME** becomes fixed.

4– The led on **PRIME** starts to flash again: transmit the source code of the original remote by pressing simultaneously the buttons ❶ and ❷, and release them when the led of the original remote starts to flash.

5– While the led flashes, press again the button of the original remote that you want to copy until the **RED** led of **PRIME** becomes fixed for the second time and then turns off.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press twice the programmed button on **PRIME**; at the second keystroke the button will be working.

DUPLICATION PROCEDURE FROM PRIME TOP TO PRIME TOP

This procedure is used when you have to copy a **PRIME** from a **PRIME** remote which has already been programmed.

We'll call **REMOTE A** the **PRIME** that we need to program, and **REMOTE B** the **PRIME** already working.

REMOTE B already working

1– On **REMOTE A** press the buttons ❶ and ❷ simultaneously and release them when the led start to flash **RED**.

2– While it is flashing, press the button on **REMOTE A** you want to program, and release it when the **RED** led flashes quickly.

3– While the led is flashing, place both remotes as shown in the picture. Press the button on **REMOTE B** you want to program; release it when the led of **REMOTE A** becomes fixed.

REMOTE A

4– The led of **REMOTE A** starts to flash again: transmit the source code of **REMOTE B** by pressing simultaneously the buttons ❷ and ❹, and release them when the led of **REMOTE B** flashes. Press the programmed button and release it when the led of **REMOTE A** becomes fixed again and then turns off.

DUPLICATION PROCEDURE STANDARD

FADINI mod. DIVO 71

The procedure must be done far from the installation.

1– On **PRIME** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **PRIME** you want to program, and release it when the **RED** led starts to flash more quickly.

3– While the led is flashing quickly, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy.

4– 4 If the led of **PRIME** becomes fixed on **GREEN**, it means that the original remote is fixed code and it will be already working.
If it becomes **RED**, it means that the original remote is rolling code and it will be working only after the memorisation to the receiver.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the programmed button on **PRIME**, release it when the **RED** led turns off and the **GREEN** led starts to flash.

2– Wait for the led to stop flashing. Therefore, press again the button to verify that the procedure was successful.

DUPLICATION PROCEDURE

V2

The procedure must be done far from the installation.

original remote

1– On **PRIME** remote press the buttons ❶ and ❷ simultaneously, and release them when the led starts to flash **RED**.

2– While the led is flashing, press the button on **PRIME** you want to program, and release it when the **RED** led starts to flash more quickly.

3– While the led is flashing, place the remotes as shown in the picture. Press without releasing the button of the original remote you want to copy. Release it when the led of **PRIME** becomes fixed.

4– The led of **PRIME** starts to flash again: press the same button on the original remote control until the **RED** led becomes fixed for the second time and then turns off.

RECEIVER AUTOMATIC PROGRAMMING VIA RADIO

The procedure must be done near the installation.

1– Press the programmed button on **PRIME**, release it when the **RED** led turns off and the **GREEN** led starts to flash.

2– Wait for the led to stop flashing. Therefore, press again the button to verify that the procedure was successful.

DUPLICATION PROCEDURE DA PRIME TOP A PRIME TOP

This procedure is used when you have to copy a **PRIME** from a **PRIME** which has already been programmed.

We'll call **REMOTE A** the **PRIME** that we need to program, and **REMOTE B** the **PRIME** already working.

REMOTE B
already working

1– On **REMOTE A** press the buttons ❶ and ❷ simultaneously and release them when the led start to flash **RED**.

2– While it is flashing, press the button on **REMOTE A** you want to program, and release it when the **RED** led flashes quickly.

3– While the led is flashing, place both remotes as shown in the picture. Press the button on **REMOTE B** you want to program; release it when the led of **REMOTE A** becomes fixed.

REMOTE A

4– The led of **REMOTE A** starts to flash again: press the same button on **REMOTE B** until the red led becomes fixed **RED** again and then turns off.

FUNCTIONS

When the receiver leaves the parent company, it is set on impulse modality.
The different modalities are activated for every single channel.

STEP TO STEP MODE – CHANNEL 1

1– Press without releasing the button: the led turns on GREEN. Release it when the led starts to flash.

2– While the led is flashing, press and release the button again: the led flashes twice confirming the correct procedure. Wait for the receiver to switch off.

STEP TO STEP – CHANNEL 2

1– Press without releasing the button: the led turns on RED. Release it when the led starts to flash.

2– While the led is flashing, press and release the button again: the led flashes twice confirming the correct procedure. Wait for the receiver to switch off.

TIMED MODE – CHANNEL 1

1– Press without releasing the button: the led turns on GREEN. Release it when the led starts to flash.

2– While the led is flashing, press and release **2 times** the button again: the led flashes twice and then becomes fixed on RED. If the button is not pressed again, the led goes off confirming the timed mode set to 60 seconds.

3– If you want to modify the contact time, you need to press again the button before the RED led goes off: the time will be set to 5 seconds. Every time you press the button again, the time will increase by 5 seconds.

TIMED MODE – CHANNEL 2

1– Press without releasing the button: the led turns on RED. Release it when the led starts to flash.

2– While the led is flashing, press and release **2 times** button again: the led flashes twice and then becomes fixed on RED. If the button is not pressed again, the led goes off confirming the timed mode set to 60 seconds.

3– If you want to modify the contact time, you need to press again the button before the RED led goes off: the time will be set to 5 seconds. Every time you press the button again, the time will increase by 5 seconds.

The maximum time which can be set is 20 minutes using 240 key presses.

PULSE MODE – CHANNEL 1

1– Press without releasing the button: the GREEN led turns on. Release the button when the led starts to flash.
Wait for the led to stop flashing confirming the successful procedure.

PULSE MODE – CHANNEL 2

1– Press twice the button. Do not release it: the RED led turns on. Release the button when the led starts to flash.
Wait for the led to stop flashing confirming the successful procedure.
